CONTENTS

I. PHYSICS AND TECHNOLOGY

1. A Study of Single Proton States for the $^{21,23}$Na Nuclei through (d,n) Reactions at 25 MeV .................................................. 1
2. Elastic and Inelastic Nucleon Scattering on $^{28}$Si in E ≤ 35 MeV and Core-Polarization Effect Derived from a Dispersive Optical-Model Analysis ................................................................. 10
3. Gamow-Teller Strength Distribution in A = 38 System Studied by the $^{38}$Ar(p,n)$^{38}$K Reaction .................................................. 19
4. The Isospin-forbidden $\beta^+$-Decay of $^{64}$Ga ........................................ 24
5. Measurement of Long-Lived $^{26}$Al Production Cross Section by $^{27}$Al(n,2n) Reaction Using Accelerator Mass Spectrometry .................. 31
6. Measurement of $^{137}$Cs(γ,n) Cross Section by Nuclear Recoil Method ..... 36
7. Nuclear g-Factors of the 3485 and 3925 keV Isomers in $^{142}$Nd .......... 40
8. PAC Study of Quenched-in Vacancy in Cadmium ................................... 43
9. On the Specy of Stage III Defects in Cold-Worked or Irradiated Cadmium ... 49
10. Calculated PAC Spectrum of $^{111}$In in an Asymmetric EFG ............... 54
11. NMR/ON (Nuclear Magnetic Resonance in Oriented Nuclei) Study Fe-Si Single Crystal ............................................................... 57
12. Mössbauer Study on Local Structural Change of Iron Species during Pyrolysis of Iron-loaded Brown Coal .............................................. 61
13. Isomeric Yield Ratios in Proton-induced Fission of $^{238}$U ...................... 66
14. Facilities for High Energy γ-Ray Measurements at CYRIC ..................... 73
15. Man Machine Communication Utility for the Data Taking System with μ-VAX ............................................................................ 79
16. Production of Focussed Radioactive Beams ........................................... 87
17. Construction of an Ion Trap for Nuclear Spectroscopy Using a Laser-Microwave Double Resonance Method (II) — Detection of the Laser-Induced Fluorescence from the Trapped Ions of $^{88}$Sr$^+$ .................. 91
19. Ion-Optical Design of a Pilot Separator for the JHP-ISOL ...................... 111
II. CHEMISTRY

1. Alpha Particle Activation Analysis of Seaweeds Using Synthetic Reference Material as a Comparative Standard .......................................................... 115
2. Determination of Trace Impurities in High Purity Rare Earth Metals and Oxides by Charged-Particle Activation Analysis ........................................ 119
3. Photon-Activation Analysis of 36 International Geostandards ............ 124
5. Adsorption of Pertechnetate Ion on Active Carbon from Aqueous Solutions of Both Acids and Their Salts ................................................................. 133
6. Preparation of Carrier-Free Strontium Isotopes ........................................... 138

III. BIOLOGY AND MEDICINE

1. An Automated [\(^{11}\)C]H\(_2\)I Synthesis with Feedback Controlled for Preparation of High Specific Activity [\(^{11}\)C]-Radiopharmaceuticals .................................................... 145
5. A Facile One-pot Synthesis of N-[\(^{18}\)F]Fluoroacetyl-D-mannosamine ...... 171
6. The Synthesis of o- and p-[\(^{18}\)F]Fluorobenzyl Bromides and Their Application to the Preparation of Labeled Neuroleptics ........... 175
7. Carrier-free 74As Production from Ge by Proton Irradiation .............. 184
8. Potential of PET Tracers for Metabolic Imaging of Tumors ................. 188
10. Mechanism for Localization of Pheophorbides in Tumor.
    I. Biodistribution and Subcellular Distribution of 14C-Labeled Pheophorbide and Chlorin in Tumor-Bearing Mice .................................................. 205
    II. Chromatographic Analysis of 14C-Labeled Pheophorbide and Chlorin in Tumor ............................................................. 212
IV. MEDICINE (CLINICAL)

1. Tracheobronchial Mucociliary Clearance and Alveolar Epithelial Permeability Measured with PET Using $^{18}$FDG Powder in Normal Volunteers .......... 237
3. Radiotherapeutic Effects on the Tumor Uptake of $^{11}$C-L-Methionine II: Monitoring of Tumor Recurrence ........................................ 246
4. Dynamic Study of Methionine Uptake in Glioma Using Positron Emission Tomography .......................................................... 252
5. Multimodal Neuroimages of Adrenoleukodystrophy in Early Stage .......... 263
6. PET Study of Dural Arterio Venous Malformation with Red Eyed Shunt Syndrome ........................................................................... 270
7. Cerebral Glucose Metabolism Around the Nidus of Arteriovenous Malformations .............................................................. 277
8. Cerebral Circulatory and Metabolic Changes Following Vascular Reconstruction in Cerebral Occlusive Disease .............................. 289
9. Decreased Cerebral Glucose Metabolism Associated with Mental Deterioration in Dementia of the Vascular Type ............................ 298

V. RADIATION PROTECTION AND TRAINING OF SAFEHANDLING

1. Neutron Streaming Through Labyrinth from a Cyclotron Room .......... 313
2. Penetration of 33 MeV Neutrons through Iron and Concrete ............... 317
3. Evaluation of Radiation Dose in Space Environment .......................... 322
4. Kinetic Analysis with Three-Compartment Model due to the Administration of $^{18}$FDG .................................................................. 328
5. Training for Safehandling of Radiation and Radioisotopes and X-Ray Machines for Beginners in Tohoku University ............................. 334
6. Radiation Protection and Management ............................................ 336
